

Second Annual Speaker Series Presents

Medical Cannabis Quality Control in California: Keeping a Weed Free Garden

**Tuesday, November 19
5:30-7:00 pm**

Humboldt State University
BSS 162 Native Forum

A considerable number of cannabis products are contaminated with chemical residues, plant growth regulators and microbiological contaminants. This presentation will provide an overview of cannabis chemical constituents, the testing methodologies available for detecting contamination, and provide insight into pesticide inhalation potential. This presentation will also describe current efforts to profile cannabis cultivars best suited for different ailments.

Jeffrey Raber, PhD is the President of KinetiChem and the founder of The Werc Shop, an independent laboratory serving the unmet public health and safety needs within the medical cannabis community.
